Unleashing Intelligence for
Integrated Care and Population Health

Technology unblocking barriers

ECCO

With:

- increasing cancer incidence,
- care across sectors,
- growing role of primary care,
- multi-morbidity,
- need for efficiency improvements
- pace of technological development

...the need and role of technology
in improving integration of cancer
care only increases.

Breaking Down Silos

- A prime example of breaking down silos: virtual multidisciplinary tumour boards. Now not even solely confined to **local implementation, but also European and international in scope.**
- **Examples of failure can be instructive too.** Often caused by breakdown of trust, and legal framework issues

Integration of Cancer Care

- Achieving the potential of technology for better integration of cancer care means:
 - **Assigning responsibilities** (Government, payers, healthcare professionals, educators)
 - **Meeting recognised user needs** (investment, education and training, legal certainties)
- Trust the crucial ingredient
- Guiding hand required – EU and national
